Response to Arguments

2. Applicant's arguments, see the remarks, filed 10 September 2010, with respect to claims 1, 16, 18, 20 and 22 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejections of 10 September 2010 have been withdrawn.
3. Applicant's arguments, see the remarks, filed 10 September 2010, with respect to claims 2, 5, 7, 9, 11, 13, 15, 17, 19, 21 and 23 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejections of 10 September 2010 have been withdrawn.
4. Applicant's arguments, see the remarks, filed 10 September 2010, with respect to claims 4, 6, 8, 10, 12 and 14 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejections of 10 September 2010 have been withdrawn.
5. Applicant's arguments, see the remarks, filed 10 September 2010, with respect to claim 24 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejection of 10 September 2010 has been withdrawn.

Art Unit: 2624

6. Applicant's arguments, see the remarks, filed 10 September 2010, with respect to claim 25 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejection of 10 September 2010 has been withdrawn.

Claim Rejections - 35 USC § 101

7. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

8. The rejections to claims 22 and 23 under 35 U.S.C. 101 are hereby withdrawn in view of the amendments and remarks received 10 September 2010.

Allowable Subject Matter

9. Claims 1, 2, 4 - 32 now (renumbered 1 - 31) are allowed.

10. The following is an examiner's statement of reasons for allowance: the prior art does not anticipate, nor does it suggest, the combination as now claimed. Specifically, generating a stereoscopic image set of images having a left image and a right image comprising a region processing step of carrying out processing of generating the stereoscopic image set of images so as to make regions, which do not include fused points corresponding to each other in a left and right image, even more unclear than the remaining regions. In other words, the prior art does not disclose determining and extracting occluded regions from a pair of left and right images and then processing the extracted regions so as to make them more unclear in the generated stereoscopic

image set of images. These elements in combination with the remaining components of the independent claims are not taught nor are they suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Kaye et al. U.S. Patent No. 7,116,323; which is directed to generating a three dimensional image from a sequence of temporally acquired two dimensional images. Kaye et al. disclose that when objects move between frames separation gaps may occur and that these gaps may be filled by various techniques one of which is blurring. However, Kaye et al. do not disclose a left and right image for stereoscopic vision nor extracting left and right regions which do not include fused points corresponding to each other in the left and right image.
- Swain U.S. Patent No. 6,157,733; which is directed to monocular cues to improve depth perception.
- Harman U.S. Publication No. 2002/0191841 A1; which is directed to the synthesis of stereoscopic image pairs from monoscopic images. Harman

Art Unit: 2624

discloses that a foreground object may be emphasized by blurring or defocusing the background, and vice-a-versa, however Harman fails to disclose blurring or defocusing any occluded or hidden regions between a left and right image pair.
